

Create notification [event Application opened/ ~~Application used~~]

Create a notification to encourage the user to intensify their use of the app.

As a user, I would like to be encouraged, praised and motivated to use the application.

1. Acceptance criteria

Create event type Application opened for two types of notifications trigger/ conditions:

- application being used for X last days (automatic: no more than X in X days).
- Application opened event is not part of this US
- application being used for X days (schedule) is not part of this US
- Dead season should be included (We shouldn't send notifications to users in dead seasons)

2. To Do

a) BE

- See BO section
- Create new endpoint for mobile app for application use
- Create rules for dead seasons

b) BO

- Value of X last days is between 1-365 days
- Event is listed in the drop down list
- Both has and has not is part of user story
- Event can be added or removed from notification
- There is no limit of events and they might be duplicated in one notification

c) iOS/Android

- send information to BE about application use once per day

d) QA

- Preparation of test data

3. Scenarios

Scenario 1 – app is open for X last days

Given application used by the user

And user is registered or anonymous

When the user has the application open in X last days

Then send notification. See diagram number 4.1.1.

Scenario 2 – app is not open for X last days

Given application not used by the user

And user is registered or anonymous

When the user has not the application open X last days

Then send notification. See diagram number 4.1.2.

Scenario 3 – app is open for X days

Given application used by the user

And user is registered or anonymous

When the user has the application open X days

Then send notification. See diagram number 4.1.3.

Scenario 4 – app is not open for X days

Given application not used by the user

And user is registered or anonymous

When the user has not the application open X days

Then send notification. See diagram number 4.1.4.

4. Attachments

4.1. Event „Application opened”

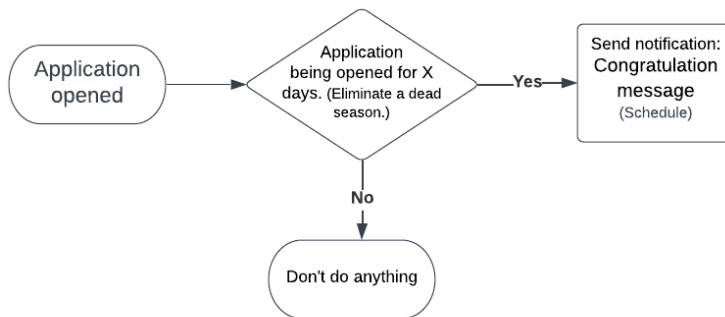

4.1.1. Notification when „has”: Congratulation message

4.1.2. Notification when „has not”: Motivating message

4.1.3. Notification when „has”: Congratulation message

4.1.4. Notification when „has not”: Activation message
