

## Create notification [event type onboarding]

Create a notification to welcome the user and encourage the user to register.

As a user, I want to be warmly welcomed as a valuable customer.

As an anonymous user, I want to see the benefits of registering, e.g. access to the account after logging out. Notification will be helpful.

### 1. Acceptance criteria

Create event type onboarding for notifications trigger/ conditions

- Automatic one per lifetime
- Only for users passed onboarding

### 2. To Do

#### a) BE

- User who has finish onboarding are in status basic or promoted
- Ignore users in status incomplete
- See BO section.

#### b) BO

- Value of X last days is between 1-365 days
- „has not” is not included for this user story
- Event is listed in the drop down list
- Event can be added or removed from notification
- There is no limit of events and they might be duplicated in one notification

#### c) QA

- Preparation of test data

### 3. Scenarios

#### Scenario 1 – Motivate to register message

Given user finish onboarding.

And user is anonymous

When X days pass after onboarding

Then send notifications. See diagram number 4.1.1.

When user is registered, then do not send notifications. See diagram number 4.1.1.

#### Scenario 2 - Welcome message

Given user finish onboarding

And user is registered or anonymous

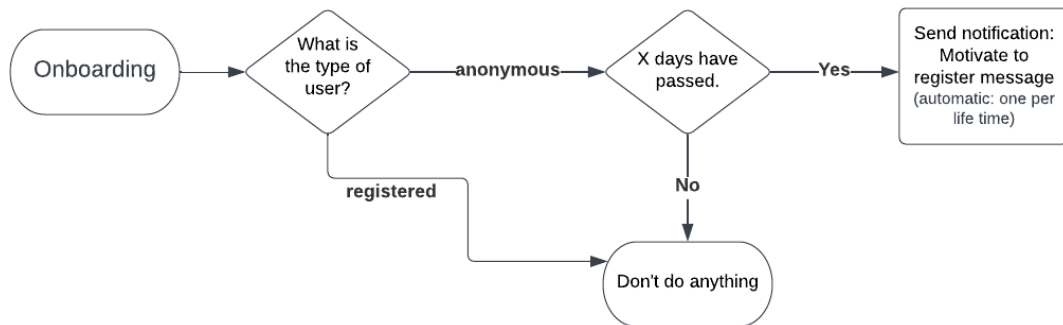

When X days pass after onboarding

Then send notifications. See diagram number 4.1.2.
